

Academic year	2015-16
Subject	11012 - Modeling and Dynamics of Neural Systems
Group	Group 1, 2S
Teaching guide	A
Language	English

Subject identification

Subject	11012 - Modeling and Dynamics of Neural Systems
Credits	0.77 de presencials (19.25 hours) 2.23 de no presencials (55.75 hours) 3 de totals (75 hours).
Group	Group 1, 2S (Campus Extens)
Teaching period	Second semester
Teaching language	English

Professors

Lecturers	Horari d'atenció als alumnes					
	Starting time	Finishing time	Day	Start date	Finish date	Office
Claudio Rubén Mirasso Santos claudio.mirasso@uib.es	14:00	15:00	Tuesday	16/02/2016	26/04/2016	IFISC, Despacho 202

Contextualisation

The aim of this subject is to introduce the students into the computational neuroscience. The subject covers an introduction to the brain, a modeling part for individual neurons, the synapsis, the model of neuronal populations, noise effects as well as sincronization aspects and metods to measure characteristics of physiological signals.

Requirements

Recommendable

It is recommended that the student has basic concepts on numerical integration of differential equations as well as fortran, C or Matlab programing.

Skills

Specific

- * E2: Development and optimal application of numerical algorithms for the simulation of complex systems..
- * E6: To understand and to model processes subject to fluctuations..
- * E8: To know to characterize generic behavior of dynamical systems and their instabilities..

Academic year	2015-16
Subject	11012 - Modeling and Dynamics of Neural Systems
Group	Group 1, 2S
Teaching guide	A
Language	English

Generic

- * TG2: To acquire the capacity to develop a complete research plan covering from the bibliographic research and strategy to the conclusions..
- * TG4: To acquire the ability to ask questions, read and listen critically and participate actively in seminars and discussions..
- * TG5: To knowing to disseminate and present the concepts acquired at a non-expert..

Basic

- * You may consult the basic competencies students will have to achieve by the end of the Master's degree at the following address: http://estudis.uib.cat/master/comp_basiques/

Content

Theme content

Introduction. Introduction

Membrane potential and electrical currents.

Neuronal activity: generalities

Nerve impulse

Voltage dependent channels

Models of individual neurons. Models of individual neurons

Hudgkin-Huxley experiment

Hudgkin-Huxley model; pulses and bursts

Reduced models; Integrated & Fire, Morris Leccar, Fitzhugh Nagumo, Izhickevich, etc.

Synapsis. Synapsis

Chemical and electrical synapses

Neurotransmitters and receptors.

Synaptic and postsynaptic conductance.

Short-range plasticity

Dynamic of coupled neurons.

Synchronization. Synchronization

Introduction

Synchronization of identical systems

Synchronization of nonidentical systems

Interacting systems. Interacting systems

Characterization of time series

Calculations of autocorrelation and cross-correlation

Mutual entropy.

Populations of neurons.

Academic year	2015-16
Subject	11012 - Modeling and Dynamics of Neural Systems
Group	Group 1, 2S
Teaching guide	A
Language	English

Neural networks
 Information Encoding. Information Encoding
 Temporal coding
 Rate Coding
 Effects of noise. Effects of noise
 Gaussian white noise, color noise and Poisson noise
 Effect of background activity of neuronal systems.
 Exampes. Exampes

Teaching methodology

In-class work activities

Modality	Name	Typ. Grp.	Description	Hours
Theory classes	Theoretical Lectures	Large group (G)	Explanation of thoretical concepts by the professor.	15
Seminars and workshops	Oral presentation	Medium group 2 (X)	Oral presentation to the whole class of an assigned paper.	2.5
Practical classes	Hands-on sessions	Large group (G)	Introduction to the use of the computational infrastructure and basic software	1.75

At the beginning of the semester a schedule of the subject will be made available to students through the UIBdigital platform. The schedule shall at least include the dates when the continuing assessment tests will be conducted and the hand-in dates for the assignments. In addition, the lecturer shall inform students as to whether the subject work plan will be carried out through the schedule or through another way included in the Campus Extens platform.

Distance education work activities

Modality	Name	Description	Hours
Individual self-study	Preparation on the oral presentation	The student must read some papers and organize a presentation	20
Individual self-study	Program development	The student has to prepare a software program to solve an specific problem.	35.75

Academic year	2015-16
Subject	11012 - Modeling and Dynamics of Neural Systems
Group	Group 1, 2S
Teaching guide	A
Language	English

Specific risks and protective measures

The learning activities of this course do not entail specific health or safety risks for the students and therefore no special protective measures are needed.

Student learning assessment

The subject will be evaluated by both the oral presentation of a certain paper and the numerically assigned work

Preparation on the oral presentation

Modality	Individual self-study
Technique	Oral tests (non-retrievable)
Description	The student must read some papers and organize a presentation
Assessment criteria	Oral presentation of a given paper

Final grade percentage: 25%

Program development

Modality	Individual self-study
Technique	Papers and projects (retrievable)
Description	The student has to prepare a software program to solve an specific problem.
Assessment criteria	Report on the numerical results

Final grade percentage: 75%

Resources, bibliography and additional documentation

Basic bibliography

1. Neurophysiology, D. Stratton, LIMUSA, 1981.
2. Theoretical Neuroscience, P. Dayan and L. F. Abbott, MIT Press, 2001.
3. Spiking Neuron Models, W. Gerstner and W. Kistler, Cambridge University Press, 2002.
4. Dynamical Systems in Neuroscience: The Geometry of Excitability and Bursting, E. Izhikevich, The MIT press, 2007.
5. The synchronization of chaotic Systems, S. Boccaletta; J. Kurthsc, G. Osipovd, D.L. Valladaresb; C.S. Zhouc, Physics Reports 366 (2002) 1–101.
